REPORT FOR WEEK ENDING AUGUST 8, 1986

Monday, August 4, 1986

Ms. Jacqueline Mummaw, Ebasco oversight leader, attended a meeting with Fred C. Hart personnel, National Gypsum's public relations representative, and a U.S. Fish and Wildlife Service representative (list of attendees attached). The purpose of the meeting was to delineate the handling of inquiries from the public and to discuss the schedule for the sampling to be conducted in the Great Swamp National Wildlife Refuge. Health and Safety personnel protective equipment was also discussed. No samples were collected by Fred C. Hart Associates (Hart).

Tuesday, August 5, 1986

The pilot test hole was completed at the front of the TIFA Building near the planned location of background well number 901. The depth to competent bedrock is estimated to be ten feet. No samples were collected by Hart.

Wednesday, August 6, 1986

Drilling was initiated on well number 903. Hart collected samples using the planned continuous split spoon technique. Hart will decide at a later date which samples will be sent for laboratory analyses. The random sampling selection chart will be revised due to the shallow depth of bedrock which will result in fewer split spoon samples.

Thursday, August 7, 1986

The well was completed at well site number 903. A ten foot screen was installed in the 34.5 foot borehole. The random sampling selection chart for samples to be sent for laboratory analyses was revised by Hart (based on 50 split spoon samples) as follows:

9	29	38	44
12	31	39	46
13	35	42	49
16	36	43	

Friday, August 8, 1986

Drilling was initiated at well location number 901 and one split spoon sample was collected by Hart.
